Patrick Koran	Understanding how much littering is occuring in towns/cities. Being able to find where littering is occurring.	Litterati	challenge friends to pick up litter. Upload information about litter such as its location. Creates databases of litter maps.	The app crashes a lot, it's difficult to upload pictures from outside the app, you can't see the data map on the app, and you have to take pictures of every single piece of trash.	An app where you can post where litter is and locate litter to pick up. Challenge friends and family to see who picks up the most litter. Does not rquire any information about litter, but you can provide additional info. Not picture require. All your litter data is saved.	54	Male	Software Engineer	If I were to create this app it would probably have a lot of similarities with the Litterati app.
Deborah Koran	Knowing the location of goats in area to pet.	Apps found for goat producers and breeders to keep data about their goats	Apps aren't applicable. Different audiences.	These apps don't track goats, they are for farmers to keep data.	This app would allow users to post where goats are and locate goats for viewing/petting.	55	Female	Project manager BAE Systems	N/A
Shauna Salem	For hikers and rock climbers keeping track of peaks they've summited and hiking lists they've completed.	Peakbagger	Has all peak bagging lists. Allows you to keep track of all mountains that you've hiked. Has a lot of statistics about hikes.	Exraneous date when finding peaks nearby. More specific forms to fill out for eack peak. More trail information for before climbing the peak. Not specific to the United States.	Make app specific to United states. Forms to fill out along the hike or after the hike with specialized questions for each summit.	25	Female	Chemistry. Works at Pfizer.	Peakbagger app has most of what she wanted.
Mike Harris	Not knowing the best technique to climb a route when rock climbing. An app the helps you know the best way to climb a rock climbing route.	No apps like this . Most climbing apps that help with approaches are for routes that never change ooutdoors.	Wants to be able to take picture of indoor route and have the app analyze the route and tell you the best steps to take to complete the climb.	Not based on other climbers who have climbed the same route because indoor routes change frequently. App needs to be able analyze routes it has never seen before.	Make the app able to analyze routes it has never seen and maybe allow other users comment on the route to help climber complete the project.	27	Male	Works in Chemistry lab .	This could be a viable app option because there aren't many app like this on the market.
Mike Szewczyk	Having all the tools needed to complete a construction project including blueprints, needed materials, and construction type calculations.	Many apps solve these problems, but there isn't one app that does it all. All-In-One Calculator Free, Building Calculator,	Likes the individual apps capabilities to calculate the materials, percentages, areas, and percentages. Likes the ability to share and view blueprints.	Doesn't like that there isn't one tool that does everying need to complete a construction project.	Create a single app that has blueprints, calculates materials, and computes other construction type calculations.	27	Male	Medical Technologist	This app seems like it wouldn't be too difficult to implment since many app have the individual
